

TERMS AND CONDITIONS

This Terms and Conditions document for Whitepaper IQ is established to formalize the legal framework of AI-based analyses and to clearly define the boundaries of liability between institutional (B2B) and individual (B2C) users. Under this agreement, the user explicitly acknowledges that the trust scores, on-chain data analyses, and modules such as the "Lie Detector" provided by Whitepaper IQ are purely algorithmic estimates and do not constitute investment advice (NFA). The platform operates by cross-referencing promises made in technical documents with real-time blockchain data from third-party providers like Arkham Intelligence and CoinGecko; however, the platform assumes no legal responsibility for outcomes resulting from mislabeling or data latencies inherent in these external sources.

For institutional users, the subscription and credit system is managed via organization-based authorization, where each analysis is reported under the project's intellectual property across seven core criteria, including Innovation, Financial Model, and Security & Compliance. Users agree not to misuse API structures or dashboard content and acknowledge that uploaded documents may be processed anonymously to improve AI models. Furthermore, users recognize that shifts in global blockchain regulations may impact the scope of service. Ultimately, any output generated by Whitepaper IQ is not a substitute for professional financial analysis; it is strictly a supportive intelligence tool designed to streamline the decision-making process by exposing discrepancies between "stated claims" and "on-chain realities.
