AI Insights

Insight Summary

This wallet presents a medium risk profile with an AML score of 22 and indirect exposure to financial crime, stealing attacks, and gambling activities. The wallet shows minimal current holdings (\$0.74 USD) but has processed over \$59,000 in total transaction volume across 1,500+ interactions, primarily distributing funds to high-value counterparties including ETH millionaires and high-activity addresses.

Wallet Risk Assessment

AML Risk Profile

The wallet carries an **AML risk score of 22**, indicating moderate risk exposure. While the wallet shows no direct involvement in illicit activities, it exhibits concerning **indirect exposure** to several risk categories:

- Indirect Financial Crime:** The wallet has transactional connections to addresses involved in financial crimes
- Indirect Stealing Attacks:** Links to addresses associated with theft or attack activities
- Indirect Gambling Activities:** Connections to gambling-related addresses

These indirect exposures suggest the wallet may have unknowingly transacted with compromised or high-risk addresses, which is common in complex transaction chains but still warrants monitoring.

Portfolio Analysis

Current Holdings

The wallet maintains minimal current balances totaling **\$0.74 USD**:

- **ETH:** 0.0004 ETH (\$0.72)
- **ZIK Token:** 133 tokens (\$0.01)

This extremely low balance relative to historical transaction volume suggests the wallet primarily functions as a **distribution mechanism** rather than a storage wallet.

Portfolio Characteristics

- **Concentration Risk:** Holdings are minimal and concentrated in just two assets
- **Liquidity:** Predominantly holds ETH, providing good liquidity
- **Token Exposure:** Limited exposure to alternative tokens (only ZIK)

Transaction Behavior Analysis

Volume and Activity Patterns

The wallet demonstrates significant historical activity with **total transaction volume exceeding \$59,000** across **1,500+ interactions**. Key patterns include:

- **Outflow Dominant:** Nearly 100% outbound transactions, confirming distribution behavior
- **High Frequency:** Extensive interaction count suggests automated or systematic usage
- **Volume Concentration:** Top counterparty represents 43% of total volume (\$25,519)

Counterparty Risk Assessment

High-Risk Interactions

- **Primary Counterparty** (0xbd19...): Unlabeled address with \$25,519 in inbound volume - represents significant concentration risk
- **Multiple High-Value Targets:** Consistent outflows to ETH millionaires and high-balance addresses

Notable Counterparty Categories

- **ETH Millionaires:** 15+ interactions with addresses holding substantial ETH
- **High Activity Addresses:** Multiple connections to addresses with elevated transaction frequency
- **Token Millionaires:** Several interactions with addresses holding significant token portfolios
- **ENS Addresses:** Interactions with named addresses (timewallet.eth, quasarbuilder.eth, etc.)

Legitimate Infrastructure

- **Staking Pools:** Transactions with smoothingpool.eth and ethpool.eth indicate legitimate DeFi activity
- **Named Addresses:** ENS domain interactions suggest engagement with established entities

Wallet Relationships

Funding Source Analysis

The wallet was **initially funded by quasarbuilder.eth** (0x3963...), which also appears as a significant counterparty with \$8,333 in transaction volume. This relationship suggests:

- **Controlled Operation:** The funding relationship indicates potential common ownership or operational control
- **Systematic Usage:** The wallet appears to be part of a structured operation rather than individual use

Risk Factors

Primary Concerns

1. **AML Indirect Exposures:** Multiple categories of indirect risk exposure
2. **Distribution Pattern:** Behavior consistent with fund distribution mechanisms
3. **Counterparty Concentration:** Heavy reliance on single high-volume counterparty
4. **Operational Structure:** Evidence of systematic rather than individual usage

Mitigating Factors

1. **No Direct Illicit Activity:** All risk exposures are indirect
2. **Legitimate DeFi Engagement:** Interactions with established staking pools
3. **ENS Integration:** Connections to named, presumably verified addresses
4. **Transparent Funding:** Clear funding source with identifiable ENS address

Recommendations

- **Enhanced Monitoring:** Implement ongoing surveillance due to indirect AML exposures
- **Counterparty Review:** Investigate the primary unlabeled counterparty representing 43% of volume
- **Pattern Analysis:** Monitor for continued distribution patterns that may indicate systematic operations
- **Source Verification:** Verify the legitimacy of the quasarbuilder.eth funding relationship
